Infosafe No™ 1CHM1 Issue Date: March 2018 RE-ISSUED by ACR

Product Name: SULFURIC ACID 5-14.9%

Classified as hazardous

1. Identification

GHS Product

SULFURIC ACID 5-14.9%

Identifier

AUSTRALIAN CHEMICAL REAGENTS (ACR) (ABN 19 008 264 211) **Company Name**

38 - 50 Bedford Street Gillman **Address**

> S.A. 5013 Australia Tel: (08) 8440 2000

Telephone/Fax Number

Fax: (08) 8440 2001

Recommended use of the chemical and restrictions on use

Fertilizers, chemicals, dyes and pigments, etchant, alkylation catalyst, electroplating baths, iron and steel, rayon and film, industrial explosives, non-ferrous metallurgy, analytical reagent and laboratory

reagent.

Other Names Name Product Code

> Sulphuric Acid 10% v/v 0589 Sulphuric Acid 10% w/v 5463 Sulphuric Acid 10% w/v 5492 Sulphuric Acid 10% w/w 0584 Sulphuric Acid 1N 0083 Sulphuric Acid 2.55 0859 Sulphuric Acid 2N 0838 Sulphuric Acid 5% v/v 2897

Other Information

EMERGENCY CONTACT NUMBER: +61 08 8440 2000 Business hours: 8:30am to 5:00pm, Monday to Friday.

Australian Chemical Reagents (ACR) does not warrant that this product is suitable for any use or purpose. The user must ascertain the suitability of the product before use or application intended purpose. Preliminary testing of the product before use or application is recommended. Any reliance or purported reliance upon Australian Chemical Reagents (ACR) with respect to any skill or judgement or advice in relation to the suitability of this product of any purpose is disclaimed. Except to the extent prohibited at law, any condition implied by any statute as to the merchantable quality of this product or fitness for any purpose is hereby excluded. This product is not sold by description. Where the provisions of Part V, Division 2 of the Trade Practices Act apply, the liability of Australian Chemical Reagents (ACR) is limited to the replacement of supply of equivalent goods or payment of the cost of replacing the goods or acquiring equivalent goods.

2. Hazard Identification

GHS classification Corrosive to Metals: Category 1

of the

Skin Corrosion/Irritation: Category 2

substance/mixture

Eye Damage/Irritation: Category 2A

Signal Word (s)

WARNING

Hazard Statement

Pictogram (s)

H290 May be corrosive to metals. H315 Causes skin irritation.

H319 Causes serious eye irritation.

Corrosion, Exclamation mark

Precautionary statement -

P234 Keep only in original container. P264 Wash thoroughly after handling.

Prevention

P280 Wear protective gloves/protective clothing/eye protection/face protection.

Precautionary statement -Response

P302+P352 IF ON SKIN: Wash with plenty of soap and water. P332+P313 If skin irritation occurs: Get medical advice/attention. P362 Take off contaminated clothing and wash before reuse.

P305+P351+P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses,

if present and easy to do. Continue rinsing.

P337+P313 If eye irritation persists: Get medical advice/attention.

P390 Absorb spillage to prevent material damage.

Infosafe No™ RE-ISSUED by ACR 1CHM1 Issue Date: March 2018

Product Name: SULFURIC ACID 5-14.9%

Classified as hazardous

Precautionary statement - Storage P406 Store in corrosive resistant/... container with a resistant inner liner.

Precautionary statement -Disposal

P501 Dispose of contents/container to an approved waste disposal plant.

3. Composition/information on ingredients

Chemical

Liquid

Characterization

Ingredients CAS **Proportion Hazard Symbol Risk Phrase** <u>Name</u>

> Water 7732-18-5 85-95 % Sulfuric acid 7664-93-9 5-15 %

4. First-aid measures

If inhaled, remove from contaminated area to fresh air immediately. Apply artificial respiration if not Inhalation

breathing. If breathing is difficult, give oxygen. Get medical aid if cough or other symptoms appear.

Ingestion Rinse mouth thoroughly with water immediately, repeat until all traces of product have been removed.

DO NOT INDUCE VOMITING. Seek immediate medical advice.

If skin or hair contact occurs, remove contaminated clothing and flush skin and hair with running water. Skin

Contaminated clothing must be laundered before re-use Skin may be treated with a 2% solution of bicarbonate of soda to neutralize acid residues. If possible, because of the high heat of dilution, quickly wipe residual acid off the skin before starting water wash. In severe cases or if irritation persists, seek

medical attention.

Eve contact If in eyes, hold eyelids apart and flush the eye continuously with running water. Continue flushing until

advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes. Do not use an

eve ointment. Seek medical attention.

First Aid Facilities Maintain eyewash fountain and drench facilities in work area.

Advice to Doctor Treat symptomatically based on judgement of doctor and individual reactions of the patient.

Protection for First

Aiders

WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when

the inhaled material is toxic, infectious or corrosive. Protect your own hands and body.

For advice, contact a Poisons Information Centre (Phone eg Australia 13 1126; New Zealand 0800 764 Other Information

766) or a doctor.

5. Fire-fighting measures

Hazards from Combustion **Products**

Irritating and highly toxic fumes and gases, including oxides of sulfur. Reaction with water or steam may generate much heat which will increase the concentration of fumes in the air, and may produce toxic and corrosive fumes. Concentrated solutions will react with carbonates to generate carbon dioxide gas, and with cyanides and sulfides to form poisonous hydrogen cyanide and hydrogen sulfide respectively.

Contact with most metals causes formation of flammable and explosive hydrogen gas.

Specific Methods

Small fire: Use dry chemical, CO2 or water spray. If safe to do so, move undamaged containers from fire

Large fire: Use dry chemical, CO2, foam or water spray - Do not use water jets.

Cool containers with flooding quantities of water until well after fire is out. Avoid getting water inside

Specific hazards arising from the

Material does not burn. Fire or heat will produce irritating, poisonous and/or corrosive gases. Containers may explode when heated. Some may ignite combustibles (wood, paper, clothing, etc.) Contact with

metals may evolve flammable hydrogen gas.

chemical **Hazchem Code**

2R

Decomposition Precautions in

340 °C (sulfuric acid).

Temp.

Wear SCBA and chemical splash suit. Fully-encapsulating, gas-tight suits should be worn for maximum

connection with Fire protection. Structural firefighter's uniform is NOT effective for these materials.

Accidental release measures

Personal Protection Wear protective clothing specified for normal operations (see Section 8)

Clean-up Methods -**Small Spillages Environmental Precautions**

Dilute with water and mop up, or absorb with an inert dry material or neutralize with sodium carbonate and then place in an appropriate waste disposal container.

Prevent from entering into drains, ditches, rivers or the sea.

Infosafe No™ 1CHM1 Issue Date: March 2018 RE-ISSUED by ACR

Product Name: SULFURIC ACID 5-14.9%

Classified as hazardous

7. Handling and storage

Handling

Precautions for Safe Avoid ingestion and inhalation of gas/fumes/vapour/spray mists. Avoid contact with skin, eyes, or clothing. Avoid prolonged or repeated exposure. Use with adequate ventilation. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep container dry. When diluting, always add the acid to water; never add water to the acid. May corrode metallic surfaces. Keep away from incompatibles such as metals, alkalis, moisture. Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. It is essential that all who come into contact with this material maintain high standards of personal hygiene ie. washing hands prior to eating, drinking, smoking or using toilet facilities.

Conditions for safe storage, including

incompatabilities

Corrosive materials should be stored in a separate safety storage cabinet or room. Store in tightly closed containers, in a cool, dry, well-ventilated area, with acid resistant floors and good drainage, away from incompatible substances. Protect from physical damage, freezing, heat, direct sunlight and moisture. May corrode metallic surfaces. Do not store together with alkalies (caustic solutions). Store away from oxidizing agents. Store away from reducing agents. Do not store near combustible materials. Do not wash out container and use it for other purposes. Inspect regularly for deficiencies such as damage or leaks. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

Extremely corrosive in presence of aluminium, of zinc. Highly corrosive in presence of steel, of copper. Slightly corrosive to corrosive in presence of stainless steel (304), of stainless steel (316).

STEL

Storage Regulations Refer Australian Standard AS 3780-1994 'The storage and handling of corrosive substances'.

Store at room temperature (15 to 25 °C recommended). Protect from freezing. Storage

Temperatures

Corrosiveness

Unsuitable Materials Metal containers.

8. Exposure	controls/	personal	protection
U. Exposure	COLLUCIO/	pei soliai	

Occupational Name

Sulfuric acid

exposure limit values

mg/m3 mg/m3 **Footnote** ppm ppm

TWA

Other Exposure Information

A time weighted average (TWA) has been established for Sulphuric acid (Worksafe Aust) of 1 mg/m³. The corresponding STEL level is 3 mg/m³. The STEL (Short Term Exposure Limit) is an exposure value that should not be exceeded for more than 15 minutes and should not be repeated for more than 4 times per day. There should be at least 60 minutes between successive exposures at the STEL. The exposure value at the TWA is the average airborne concentration of a particular substance when calculated over a normal 8 hour working day for a 5 day working week.

Appropriate

Provide sufficient ventilation to ensure that the working environment is below the TWA (time weighted engineering controls average). Where vapours or mists are generated, particularly in enclosed areas, and natural ventilation is inadequate, a flame proof exhaust ventilation system is required. Refer to AS 1940-The storage and handling of flammable and combustible liquids and AS 2430-Explosive gas atmospheres for further

information concerning ventilation requirements.

Respiratory **Protection**

Where ventilation is not adequate, respiratory protection may be required. Avoid breathing vapours or mists. Select and use respirators in accordance with AS 1716 - Respiratory Protective Devices and be selected in accordance with AS 1715 - Selection, Use and Maintenance of Respiratory Protective Devices. When mists or vapours exceed the exposure standards then the use of the following is recommended: Approved respirator with organic vapour and dust/mist filters. Filter capacity and respirator type depends on exposure levels.

The use of a face shield, chemical goggles or safety glasses with side shield protection as appropriate. **Eve Protection** Must comply with Australian Standards AS 1337 and be selected and used in accordance with AS 1336.

Hand protection should comply with AS 2161, Occupational protective gloves - Selection, use and maintenance. Recommendation: Excellent: NR latex, vinyl and nitrile. Good: Neoprene gloves

Final choice of personal protective equipment will depend on individual circumstances and/or according **Personal Protective**

Equipment Footwear

Hand Protection

to risk assessments undertaken. Safety boots in industrial situations is advisory, foot protection should comply with AS 2210,

Occupational protective footwear - Guide to selection, care and use.

Clean clothing or protective clothing should be worn. Clothing for protection against chemicals should

Body Protection

comply with AS 3765 Clothing for Protection Against Hazardous Chemicals.

Always wash hands before smoking, eating or using the toilet. Wash contaminated clothing and other **Hygiene Measures** protective equipment before storing or re-using.

9. Physical and chemical properties

Liquid **Form**

Clear, colourless liquid. **Appearance**

Odour Odourless.

Decomposition

340 °C (sulfuric acid).

Temperature Melting Point

-2 °C (5%); -5.7 °C (10%).

Boiling Point 100.7 °C (5%); 101.6 °C (10%). Solubility in Water

Solubility in Organic Insoluble in methanol, diethyl ether, n-octanol (10%).

Fully miscible. Exothermic reaction with water.

Solvents

1.03 (5%); 1.07 (10%).

Specific Gravity

Acidic.

pH of 1.0 N solution (~5.0%): 0.3; pH of 0.1 N solution (~0.5%): 1.2;

Vapour Pressure The highest known value is 0.1 kPa (1 mmHg) (@ 20 °C) (Sulfuric Acid). The highest known value is

17.535 mm of Hg (@ 20 °C) (Water). Weighted average: 15.82 mm of Hg (@ 20 °C) (10%).

Vapour Density

The highest known value is 3.4 (Air = 1) (Sulfuric acid). Weighted average: 0.76 (Air = 1) (5%); 0.89 (Air (Air=1) = 1) (10%).

Evaporation Rate 0.36 (Water) compared to (n-Butyl Acetate=1).

Odour Threshold The lowest known value is >1 ppm (SULFURIC ACID).

Volatile Component > 95 %vol @ 21 °C (0.1 - 10%).

Flammability Non combustible material. Contact with moisture or water may generate heat. Contact with strong

alkalis may generate heat.

Explosion Properties Contact with most metals causes formation of flammable and explosive hydrogen gas. Containers may

explode when heated or if contaminated with water.

98.08 (Sulfuric acid) **Molecular Weight**

10. Stability and reactivity

Chemical Stability Stable under normal temperatures, pressures and conditions of use and storage. Hygroscopic.

Concentrated solutions react violently with water, splattering and liberating heat.

Conditions to Avoid Excess heat, extremes of temperature and direct sunlight, metals, combustible materials, organic

materials, oxidizers, amines, bases and incompatible materials.

Alkali metals, alkaline earth metals, alkali compounds, ammonia, alkali hydroxide solutions, metals, Incompatible

metal alloys, organic solvents, permanganates. **Materials**

Irritating and highly toxic fumes and gases, including oxides of sulfur. Reaction with water or steam may **Hazardous**

generate much heat which will increase the concentration of fumes in the air, and may produce toxic and **Decomposition** corrosive fumes. Concentrated solutions will react with carbonates to generate carbon dioxide gas, and **Products**

with cyanides and sulfides to form poisonous hydrogen cyanide and hydrogen sulfide respectively.

Contact with most metals causes formation of flammable and explosive hydrogen gas.

Possibility of

Hygroscopic. Exothermic reaction with water. Reacts violently with water and alcohol especially when hazardous reactions water is added to the product. Highly reactive with reducing agents, combustible materials, organic

materials, metals, oxidizing agents, acids, alkalis. Flammable hydrogen gas is generated by the action of

the acid on most metals (i.e. lead, copper, tin, zinc, aluminium, etc.). Will not occur.

Polymerization

Hazardous

11. Toxicological Information

Ingestion May be harmful if swallowed. Corrosive. Ingestion of this product may cause irritations of mucous

membranes in the mouth, pharynx, oesophagus, and gastrointestinal tract, possible gastrointestinal tract burns, severe and permanent corrosion and tissue damage to the mouth, throat, oesophagus, stomach and digestive tract. Swallowing may lead to the danger of perforation of the oesophagus and stomach. May cause general feeling of sickness, sore throat, nausea, vomiting and diarrhoea. Circulatory collapse with clammy skin, weak and rapid pulse, shallow respirations, and scanty urine may follow ingestion. Circulatory shock is often the immediate cause of death. Effects should be less severe than from

exposure to higher concentrations of sulfuric acid.

Page: 5 of 6

Infosafe No™ 1CHM1 Issue Date : March 2018 RE-ISSUED by ACR

Product Name: SULFURIC ACID 5-14.9%

Classified as hazardous

Inhalation May be harmful if inhaled. Inhalation of product vapours may cause severe irritation of the nose and

throat, damage to the mucous membranes and upper respiratory tract, possible burns, burning sensation, coughing, wheezing, laryngitis, shortness of breath, labored breathing, headache, nausea, and vomiting. Inhalation may result in dental erosion, spasm, inflammation and oedema of the larynx and bronchi, chemical pneumonitis, and pulmonary oedema. Effects should be less severe than from

exposure to higher concentrations of sulfuric acid.

Skin Corrosive. Causes irritation to skin and mucous membranes, and possible skin burns and strong

corrosive effect on skin and mucous membranes. Symptoms may include redness, itching, and pain. May be harmful if absorbed through the skin. Circulatory collapse with clammy skin, weak and rapid pulse, shallow respirations, and scanty urine may follow skin contact. Circulatory shock is often the

immediate cause of death.

Eye Corrosive. Causes eye irritation and possible severe eye burns and strong corrosive effect. Symptoms

may include tearing, blurred vision, redness, stinging, pain, and burns to eye tissue. Concentrated solutions can cause blindness. Effects should be less severe than from exposure to higher

concentrations of sulfuric acid.

Carcinogenicity Occupational exposure to strong-inorganic-acid mists containing sulfuric acid is evaluated in the IARC

Monographs (Vol. 54; 1992) as Group 1: Carcinogenic to humans.

Reproductive Toxicity Chronic Effects May cause adverse reproductive effects based on animal data.

Chronic exposure may cause lung damage. Prolonged exposure to the skin or eyes may cause burns. Repeated or long term exposure to mist or vapours may cause erosion of teeth. Chronic exposure to

mists containing sulfuric acid is a cancer hazard.

12. Ecological information

Ecotoxicity Damage of aquatic organisms. Harmful effect due to pH shift. Toxic effect for fishes and algeal. Caustic

even in diluted form. Does not cause biological oxygen deficit. Endangers drinking-water supplies if allowed to enter soil and/or waters in large quantities. Neutralization possible in waste water treatment

When released into the soil, this material may leach into groundwater. When released into the air, this material may be removed from the atmosphere to a moderate extent by wet deposition. When released

into the air, this material may be removed from the atmosphere to a moderate extent by dry deposition.

plants.

Methods for the determination of biodegradability are not applicable to inorganic substances.

Empirical Formula & H2SO4 (pure substance)

Structural Formula

Manufacturers Advice

Dilution of acid should always be carried out by slowly adding acid to water with constant stirring.

Concentrated acid reacts violently with water, generating heat and causing splattering.
